SCORING BAND GUIDE

Use the applicable band for each criterion's Max Marks value to convert your qualitative assessment into a numeric score, e.g. for Max Marks = 15: Excellent 15-13, Very Good 12-10, Good 9-7, Average 6-4, Poor 3-0.

Max Marks	Excellent	Very Good	Good	Average	Poor
20	20-17	16-13	12-9	8-5	4-0
15	15-13	12-10	9-7	6-4	3-0
10	10-9	8-7	6-5	4-3	2-0
5	5	4	3	2	1-0

Universal Challenge sub-items (Max Marks = 3 each) use a simplified live-demonstration scale instead of the band guide above: 3 = fully demonstrated live on the website/hardware demo; 2 = partially demonstrated / minor gaps; 1 = explained verbally only, not shown; 0 = not addressed or ignored.

PART A: EXISTING PROJECT EVALUATION (Weightage: 50%)					
Sr. No.	Evaluation Criterion	Max Marks	What the Judge Should Evaluate	Score Awarded	Remarks
1	Innovation & Uniqueness	10	Originality, creativity, novelty and differentiation from existing solutions		
2	Technical Soundness & Feasibility	10	Architecture, technology selection, reliability, technical implementation and feasibility		
3	Prototype Development & Functionality	15	Working prototype, completeness, core features and quality of implementation		
4	Problem Relevance & Effectiveness	15	Understanding of the problem, relevance to users and effectiveness of the proposed solution		
5	Integration & Scalability	10	Integration of components, scalability, deployment potential and ability to handle growth		
6	Usability & User Experience	10	Ease of use, accessibility, interface quality and practical adoption		
7	Impact & Market Readiness	10	Social, economic or environmental impact, sustainability and real-world deployment potential		
8	Presentation & Final Demonstration	5	Clarity, quality of demonstration, communication and response to questions		
9	Universal Challenge Response	15	Live response to the 5 surprise scenario challenges revealed during the event (3 marks each) — identical across all 8 tracks and both hardware/software teams		
9a	The Blackout	3	Power/connectivity failure — does the website/app degrade gracefully instead of going blank or erroring out		
9b	The Bad Reading	3	Faulty/improbable input (sensor, API, form) — does the system flag it instead of confidently acting on garbage		
9c	The Surge	3	Sudden 10x load — evidence of load-handling thought (queuing, throttling, graceful degradation), not just demo-scale design		
9d	The Intruder	3	Attempted misuse/attack (bad input, spoofed sensor, API abuse) — a concrete security safeguard demonstrated live, not just claimed		
9e	The Skeptic	3	Stakeholder questions a decision/output — can the system explain or justify it, not just display a result		
Total		100			

PART B: NEW PROBLEM STATEMENT / CHALLENGE EVALUATION (Weightage: 50%)					
Sr. No.	Evaluation Criterion	Max Marks	What the Judge Should Evaluate	Score Awarded	Remarks
1	Innovation & Uniqueness	10	Originality, creativity, novelty and differentiation from existing solutions		
2	Technical Soundness & Feasibility	10	Architecture, technology selection, reliability, technical implementation and feasibility		
3	Prototype Development & Functionality	15	Working prototype, completeness, core features and quality of implementation		
4	Problem Relevance & Effectiveness	15	Understanding of the problem, relevance to users and effectiveness of the proposed solution		

5	Integration & Scalability	10	Integration of components, scalability, deployment potential and ability to handle growth		
6	Usability & User Experience	10	Ease of use, accessibility, interface quality and practical adoption		
7	Impact & Market Readiness	10	Social, economic or environmental impact, sustainability and real-world deployment potential		
8	Presentation & Final Demonstration	5	Clarity, quality of demonstration, communication and response to questions		
9	Universal Challenge Response	15	Live response to the 5 surprise scenario challenges revealed during the event (3 marks each) — identical across all 8 tracks and both hardware/software teams		
9a	The Blackout	3	Power/connectivity failure — does the website/app degrade gracefully instead of going blank or erroring out		
9b	The Bad Reading	3	Faulty/implausible input (sensor, API, form) — does the system flag it instead of confidently acting on garbage		
9c	The Surge	3	Sudden 10x load — evidence of load-handling thought (queuing, throttling, graceful degradation), not just demo-scale design		
9d	The Intruder	3	Attempted misuse/attack (bad input, spoofed sensor, API abuse) — a concrete security safeguard demonstrated live, not just claimed		
9e	The Skeptic	3	Stakeholder questions a decision/output — can the system explain or justify it, not just display a result		
Total		100			

Final Score Consolidation			
Component	Score (out of 100)	Weightage	Weighted Score
Existing Project (Part A)		50%	
New Problem Statement / Challenge (Part B)		50%	
Final Score (out of 100)			

Formula: Final Score = (Existing Project Score × 50%) + (New Challenge Score × 50%)

Judge's Overall Remarks

Key Guidelines for Judges

- Evaluate solely on the defined criteria and demonstrated performance; apply the same standard to every team.
- Ask teams to demonstrate claimed functionalities and question them to verify technical and practical claims.
- The 5 Universal Challenge sub-items (9a-9e) must be scored only on what is demonstrated live during the designated challenge window — not on slides or verbal claims.
- Do not consider institutional affiliation, team size, or location while awarding scores.
- Do not disclose individual scores or rankings during evaluation.
- Disclose any potential conflict of interest before evaluating a team.

Conflict of Interest Declaration: I confirm I have no undisclosed conflict of interest in evaluating this team. Yes ☐ No ☐
